## OBJECTIVE

---

Final year BSc (Hons) Computer Science student at the University of Brighton, currently working as a Student Software Developer at Eschmann Technologies after successfully completing a placement year. Balancing full-time studies alongside work, applying the same dedication to both academic and professional work. Passionate about full-stack development with proven experience in cloud integration, data engineering, embedded systems deployment, and building automated solutions that drive operational efficiency. Seeking a challenging graduate software engineering role where I can apply my expertise in modern development practices, system automation, and delivering scalable, maintainable solutions.

## EDUCATION

---

**Bachelor of Computer Science with a placement year**, University of Brighton Expected June 2026  
**Predicted Grade: First (1st)**

## SKILLS

---

|                           |                                                                             |
|---------------------------|-----------------------------------------------------------------------------|
| <b>Languages</b>          | Python, C#, TypeScript, JavaScript, Java, SQL, HTML, CSS, SCSS              |
| <b>Frameworks</b>         | React, .NET, Polars, Slim Framework, Webpack                                |
| <b>Cloud &amp; DevOps</b> | Azure Functions, Azure Logic Apps, Azure DevOps, Docker, Linux              |
| <b>Databases</b>          | MySQL, PostgreSQL, Azure Table Storage                                      |
| <b>Tools</b>              | Git, Sendgrid, REST APIs, JIRA, Raspberry Pi                                |
| <b>Soft Skills</b>        | Teamwork, Problem Solving, Communication, Adaptability, Attention to Detail |

## EXPERIENCE

---

**Student Software Developer** August 2024 - Current  
Eschmann Technologies *Lancing, UK*

- Created an automated booking system using Azure Functions integrated with third-party APIs to manage field engineer appointments, implementing intelligent calendar parsing for availability matching and building a bidirectional email notification workflow that reduced scheduling conflicts and manual coordination overhead.
- Completed and containerized an auto-calibration application combining a C# backend with TypeScript React frontend, deployed the solution on Raspberry Pi devices via Docker with automated RS-232 serial communication scripts to interface with autoclaves and Yokogawa equipment, eliminating manual calibration processes.
- Developed a Python-based inventory optimization application that processes multi-table datasets using dataframes to calculate dynamic min-max stock levels for field engineer vans, applying custom formulas across parts fitted, equipment, and usage data to ensure optimal inventory distribution.

**Web Developer Research Placement** Jun 2023 - Oct 2023  
University of Brighton *Brighton, UK*

- Developed a museum storage image gallery web application using a web-based visualization system to deliver a dynamic and engaging presentation of our extensive image collection.
- Employed IIIF (International Image Interoperability Framework) to standardize image description and delivery methods, continuous access to structured image sequences.

**Back End Developer Research Placement** Apr 2023 - Jun 2023  
University of Brighton *Brighton, UK*

- Enhanced data management and accessibility by leading the migration of an incumbent database system from an Excel-based architecture to a structured SQL database, introducing efficiency and scalability

- Developed a RESTful API to optimize data retrieval and integration for an existing website, enhancing user experience and real-time data access.

## **FC Associate**

Amazon

Sep 2022 - Current

*Bognor Regis, UK*

- Manage high-volume warehouse operations including shipment processing, quality control, and inventory accuracy in a fast-paced environment.
- Collaborate with cross-functional teams to maintain operational efficiency and safety standards.

## **Manager**

Papa John's

Jan 2019 - Aug 2022

*Brighton, UK*

- Managed all aspects of pizza shop operations, including staff scheduling, inventory control, and financial management.
- Trained and supervised a team of kitchen staff, servers, and delivery drivers to maintain high-quality service.
- Controlled food and labor costs through effective inventory management and scheduling.

## **PROJECTS**

---

### **Artisan Authentication Platform (Final Year Project)**

- Developing a multilingual web application enabling artisans to document craft creation processes and generate W3C Verifiable Credentials paired with QR codes for authenticity verification.
- Implementing Decentralized Identifier (DID) resolution and cryptographic credential signing to provide tamper-proof provenance without reliance on centralized authorities.

### **ZapApp – Pangolin Wildlife Tracker (PWA)**

- Built a Progressive Web Application for pangolin wildlife tracking using React, Slim Framework (PHP), and MySQL, deployed on university hosting infrastructure with offline-first capabilities.
